Airborne low frequency sonar

The budget request included \$352.1 million to procure six MH-60R aircraft in fiscal year 2004 and to pay various non-recurring charges and production support items for the MH-60R helicopter program. The budget request does not include any such funding for the AN/AQS-22 Airborne Low Frequency Sonar (ALFS), a dipping sonar system that will be part of the MH-60R helicopter's equipment.

The Navy competitively selected ALFS in fiscal year 1992 to outfit the MH-60R fleet.

The Navy could use additional funds in fiscal year 2004 to improve logistics support of the ALFS systems by upgrading the consolidated automated support systems, developing intermediate technical manuals, qualifying a second source for the ALFS cable, and upgrading the sonar signal generator. Such efforts could lead to significant reductions in total life cycle costs for ALFS. Therefore, the committee recommends an increase of \$3.5 million to pay for these activities to support ALFS system introduction.

| | Unjustified support costs | | | -10,000 |

MH-60S [MYP].—The budget request included \$130,377,197 for support costs. Of this total \$92,509,794 is requested for peculiar training equipment. In response to the Committee’s review of this request, the Navy was unable to explain fully the costs and activities funded within this amount. The Committee recommends a decrease of \$20,000,000.

MH-60R.—The budget request included \$93,997,962 for support costs, an increase of \$42,838,962 above funds available for fiscal year 2003. In justifying these costs to the Committee, the Navy was unable to tie requested funding to activities. The Committee recommends a decrease of \$10,000,000.
